

XMB (GUI)

XMB was the default user interface for RetroArch, until it was succeeded by Ozone in RetroArch 1.7.6. It is based on Sony's "cross-media bar" GUI, most widely known from the PSP and PlayStation 3.

Menu Structure

The top-level menus and playlists are displayed in a single "primary" row, running from left to right. For the selected row item, a submenu column will appear below it.

Navigating the menus

XMB is designed for use with a gamepad or keyboard.

Press `left` or `right` to move along the primary row, and press `up` or `down` to scroll the column. The selected item in this column is always the first line under the primary row.

The user can press `backspace` to go back a step.

Input

Content is controlled using a keyboard or gamepad, connected via USB or Bluetooth.

See [Input and Controls](#)

Thumbnails

By default, no thumbnails are displayed. Up to 2 can be enabled and appear on the lower right side of the screen when a Playlist entry is selected. The secondary thumbnail will appear on the left. Press the `spacebar` key to view the thumbnails full-screen (press `spacebar` again to toggle the view off).

Chat with

Thumbnails can be enabled in `Settings > User Interface > Appearance`, toggling the `Primary Thumbnail` and/or `Secondary Thumbnail` option. Thumbnails can be boxart, a title screen screenshot, or a gameplay screenshot.

Themes

XMB has a number of styles built-in. They can be changed in the `Settings > User Interface > Appearance` menu.

- The background color can be changed: Scroll through `Color Theme` to select a color.
- The animated background "wallpaper" can also be changed (`Shader Pipeline`), the default being a PlayStation-style animated ribbon.
 - XMB can even show different wallpapers depending on the playlist selected: [Follow this guide](#) using [these files](#).
- XMB also has a selection of icon sets to choose from (`Icon Theme`).
